PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience building and owning full-stack applications with Laravel, React, and Next.js for logistics platforms. Now focused on AI engineering: production AI automation at work, and open-source multi-agent RAG and text-to-SQL projects built in Python and FastAPI.

WORK EXPERIENCE

Stockarea

August 2023 - Present | India

Software Engineer L2 (April 2026 - Present), previously Software Engineer L1 (October 2024 - April 2026)

- Built and run three automated outreach channels for the sales team (email, WhatsApp reminders, and AI voice calls) on n8n with open-source LLMs, handling 100+ voice calls a week. Constrained prompts and validated every response, with failure logging and automatic retries. Cut follow-up work that filled a rep's day to 5 to 15 minutes.
- Diagnosed and fixed a major performance bottleneck in report-generation APIs, cutting memory usage from ~3 GB to ~200 MB and response time from ~5 minutes to ~5 seconds by restructuring how large datasets were queried and processed.
- Build and own the Laravel admin API powering core logistics workflows across CRM, ERP, positions, and asset management, plus internal Next.js and React applications, delivered end to end through GitHub CI/CD, Docker, and Coolify.
- Designed and built the company's CRM modules and the positions and asset-management backend end to end, owning data structuring and architecture.
- Automated a core operations workflow that occupied one person for a full working day, cutting it to roughly 5 minutes of hands-off processing.
- Built and maintain the finance module: invoices, purchase orders, and bills synced with the Zoho Books API over webhooks, with automated profit and revenue reporting for the finance team, plus vendor bill-payment and expense tracking.

Solutions Architect, Automation (August 2023 - October 2024)

- Designed and built the foundation of Stockarea's internal automation, translating business operations into reliable backend workflows, with Laravel and Google API integrations connecting disparate internal tools.
- Established reporting with Metabase, MongoDB, and SQL, plus early workflow tools in Google Apps Script and AppSheet still used daily.

Founder & Software Lead, Flare Innovations

February 2022 - June 2023 | India

- Founded and led development of IoT-based monitoring systems for aquaculture and hydroponics, building the Python applications that processed real-time sensor data and leading a 10-person team through prototyping, deployment, and testing.
- Deployed a pilot with ICAR-CIBA (Central Institute of Brackishwater Aquaculture); incubated at CIBA and Annamalai University. Wound down after graduation to join Stockarea.

AI PROJECTS

- DocMagic**, multi-agent RAG document assistant: a LangGraph supervisor routes each question to one specialist over hybrid retrieval (vector + BM25, reranked), with every answer cited to its source page. *Python, FastAPI, LangGraph, Next.js, PGVector*. github.com/yashoncode/docmagic
- Tevel IntelliDB**, AI-first SQL client: turns plain English into safe, reviewable SQL by reasoning over database metadata only, with a read-only validator and an auto-repair loop. *Electron, Vue 3, TypeScript, MySQL, PostgreSQL*. github.com/yashoncode/Tevel-IntelliDB
- ImaGen**, prompt-engineering playground: compares eight prompting strategies on the same image-editing instruction, exposing every message sent to the model. *Python, Streamlit, NVIDIA NIM*. github.com/yashoncode/imaGen-Prompt-Enhancement

SKILLS

Generative AI: Multi-Agent Systems, RAG Pipelines, LangChain, LangGraph, MCP, Prompt Engineering, PGVector, ChromaDB, Langfuse, Text-to-SQL
Backend: Laravel, PHP, FastAPI, REST API Development, CRM and ERP Modules, Async Jobs and Scheduling, n8n Automation, Feature and Unit Testing (PHPUnit, Pytest)
Databases: MySQL, PostgreSQL, MongoDB | **Cloud and DevOps:** AWS (RDS), Docker, Git, GitHub CI/CD, Coolify, Linux
Frontend: Next.js, React, TypeScript, Tailwind CSS | **Programming Languages:** Python, PHP, JavaScript, TypeScript

EDUCATION

B.E. in Electronics and Communication Engineering

Sri Sairam Engineering College, Chennai | 2019 - 2023 | CGPA: 9.05/10

PUBLICATIONS AND AWARDS

- IEEE Xplore, 2022: Intelligently Optimized System for Hydroponic Cultivation | Aiderbot: DTMF Based Medical Robot
- Patent filed: Intelligent Transport Vehicle Management and Routing System (App. No. 202241077102)
- Mentor, Smart India Hackathon Finalist Team, 2024 | Best Outgoing Student, Institution of Engineers India (IEI), 2023
